Patient Diabetes History & Profile

Patient ID: P-20261009-154554-ED72BA3F

Diabetes Assessment Result

Model Prediction	Negative
Blood Glucose Level	188.4 mg/dL
Glucose Category	Diabetes range (if fasting; confirmation required)

Assessment Information

Item	Response
Age	24
Gender	Female
Polyuria	No
Polydipsia	No
Sudden Weight Loss	No
Weakness	No
Polyphagia	No
Genital Thrush	No
Visual Blurring	No
Itching	No
Irritability	No
Delayed Wound Healing	No
Partial Paresis (partial muscle weakness)	No
Muscle Stiffness	No
Hair Loss (Alopecia)	No
Obesity	No
Fasting Blood Glucose	188.4 mg/dL
Glucose Reference Level	Diabetes

Clinical Interpretation

The questionnaire-based prediction and fasting blood glucose result are assessed separately. A fasting blood glucose level of 188.4 mg/dL falls within the diabetes range. A result in this range generally needs clinical confirmation. The questionnaire prediction is Negative, an estimate generated by a machine-learning model that cannot confirm or rule out diabetes. Consult a qualified healthcare professional for appropriate medical evaluation.

Health Alert

Your fasting blood glucose result is 188.4 mg/dL, which is at or above the 126 mg/dL diabetes-range threshold and needs clinical confirmation. Arrange prompt medical evaluation, especially if you have symptoms; seek urgent care if you feel severely unwell.
